# ICONIC BRAND

Freeride, Resort and Touring ski pioneer since 2002, ZAG has become a go-to choice for all terrain skiing.

ZAG skis are envisioned, designed and developed in the ZAGLAB in Chamonix, tested in the Alps, and recommended by mountain professionals. With our dedication to authenticity and sustainability, ZAG empowers passionate skiers to enjoy a unique experience on intuitive, high-performance skis.

“In 2011, ZAG launched the UBAC and pioneered ‘Freetouring’, bridging the gap between the worlds of ski touring and freeriding. This innovative ski quickly became a best seller. Since then, Bastien and the R&D team have been constantly improving the ‘ski feeling’ of this legendary ski.

For the 2025-26 season we decided to introduce the UBAC NEXT GENERATION, incorporating advanced technology and innovative design. Thanks to its new shape, cutting-edge materials and aspirational design, with this NEW UBAC you will experience the perfect blend of style and pleasure on all types of snow. This season we’ve also completely redesigned our most playful range, the SLAP. With eye-catching graphics and dynamic color schemes, this ski is perfect for skiers who want to embrace adventure and creativity. Talented artist Tommy brings a fresh, young, and urban flair to the slopes. Get ready to have fun with our new SLAP range, where art meets performance!

You are warmly invited to our newly revamped office in Chamonix! Come and try out our skis, visit our ZAG LAB, or just enjoy a chat in front of the fire. Enjoy your winter and be Happy Together.”

Caroline de Wailly CEO

# INNOVATIVE DESIGN

We've always been inspired by art and artists of all kinds and backgrounds. For the UBAC range we looked at the work of Gunta Stolz and her tapestry. We loved the way she was able to tell a story with shapes and colors.

This year we wanted to try something new, drawing a panoramic landscape and telling our own story. Drawing inspiration from our DNA, we used a part of our logo to draw the paths with curved or straight lines, mellow or steep mountains but always sharing your line with others. Our skis are designed for adventures - from mellow hills and mountain passes to sharper and steeper peaks, we've created our own mountain chain.

Last year, we worked with a new artist to design the SLAP 104 Lite. Listening to your feedback, we kept the flow going with Tommy Knuts to design the new SLAP range for this year.

The result is something unique. A diptych mixing abstract shapes with mountains, snow, trees and whatever your mind can imagine. Bringing back ZAG roots with illustrations but twisting it with our color block DNA.

# ADVANCED TECHNOLOGY

Our two engineers Bastien Saillard and Paul Chevalot design our skis in the ZAG Lab located in Chamonix with the goal of satisfying the many tastes of our customers. Always hungry to improve, they spend their time studying innovative shapes, materials, and constructions.

"We are compelled to endlessly innovate by creating skis that are increasingly intuitive, comfortable, high performing, and that provide skiers with a unique riding experience. With our concept store at the foot of Grands Montets, our playground is in our backyard. Being so connected with the environment is a true source of inspiration. This is what allows us to create such comfortable and high-performing skis."

Bastien Saillard, Director of Research and Development

The ZAG LAB allows our engineers to create prototypes in record time, and its prime location in Chamonix lets us test them right away and make improvements accordingly. The team was able to test the skis on all types of snow. This year, they developed the MATA, a new all-mountain ski that allows unique carving sensations.

This connection to nature pushes ZAG's R&D team to create products that are respectful to the environment, especially through the use of new materials or designs. The ZAGREEN Program represents ZAG's commitment to sustainability.

# ZAGREEN PROGRAM

Aware that our playground is threatened and that the quality of the air in the valley is more and more an issue of discussion, ZAG has launched the ZAGreen Program. Created in 2017, the aim of this program is to reduce the environmental impact of the ski industry. The actions that will be done will concern the manufacturing of the products, the way we practice skiing and also the daily life in our office. In addition to the measures involving only the company, the aim is to increase awareness among the whole community about the environmental challenge that is the air quality in our valley. ZAGreen is a project that hopes to be heard and also to involve more actors of this beautiful place.

All of our materials and products are developed in collaboration with our suppliers to reduce the impact while keeping the performance, quality and durability of our skis unchanged.

For example, our thermoplastics are made from recycled materials and produced in a responsible way (REACH, reductions of waste,...).

The enrolment of the ski-touring line in the project 1% for the planet also helps ZAG reaching its goal : preserving its playground. In 2021, ZAG redistributed this percentage to Mountain Wilderness. In 2023, we are giving the 1% to Mountain Riders and the cleaning project «Adopt ton spot», in Chamonix (La Flégère).

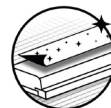

#### BIO SOURCED RESIN

We have used a resin which is 33% bio-sourced to produce the ADRET range since 2016. 25 % for the other range. It is mainly composed of oil produced with oil plants.

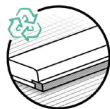

#### MATERIALS FROM EUROPE

Constant research to find the most performing and eco-responsible materials.

#### TOPSHEET

Our topsheet are made of 50% bio-sourced materials.

#### RECYCLED EDGES

Thick edges on alpine skis on thin edges on ultra-light skis. The edges are from recycled metal.

#### WOODEN CORE

Quality gain. Ensures the durability. Respects the forests sustainable management.

#### RECYCLED BASE

Up to 85% of recycled materials on black base only.

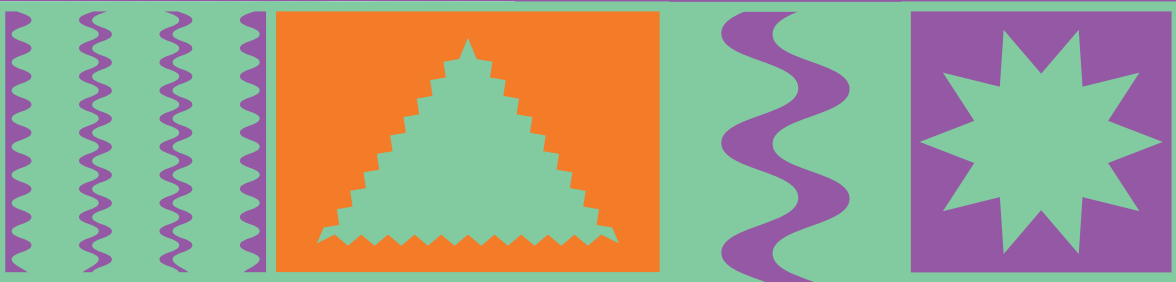

#### COTTON BAGS

We switched to bio cotton bags packaging in 2020 to stop producing around 1600kg of plastic each year.

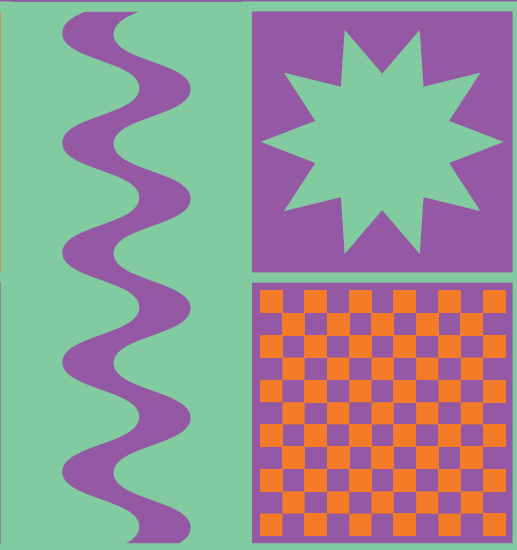

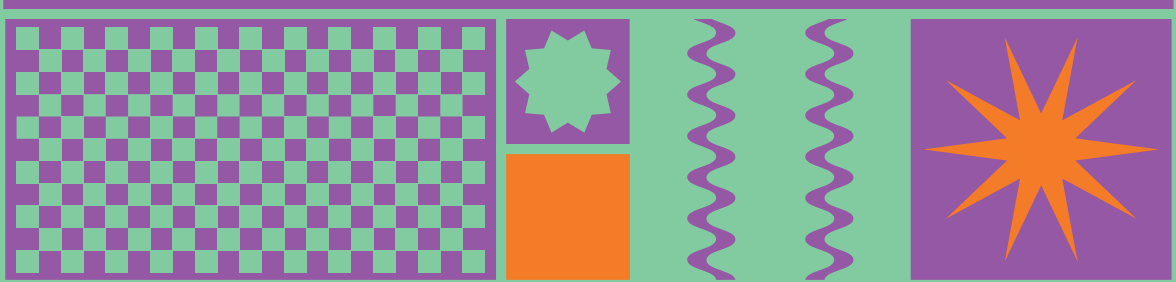

**HAPPY**

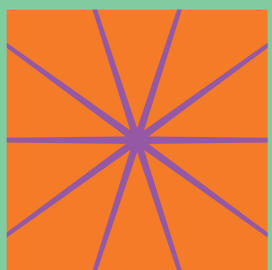

**T\*GETHER**

Inspired by 70s surf culture, we're shaking up the traditional vision of ski touring with an unconventional approach. A perfect invitation to explore the outdoors between friends, where fun comes first!

# NEW LIGHT CONSTRUCTION

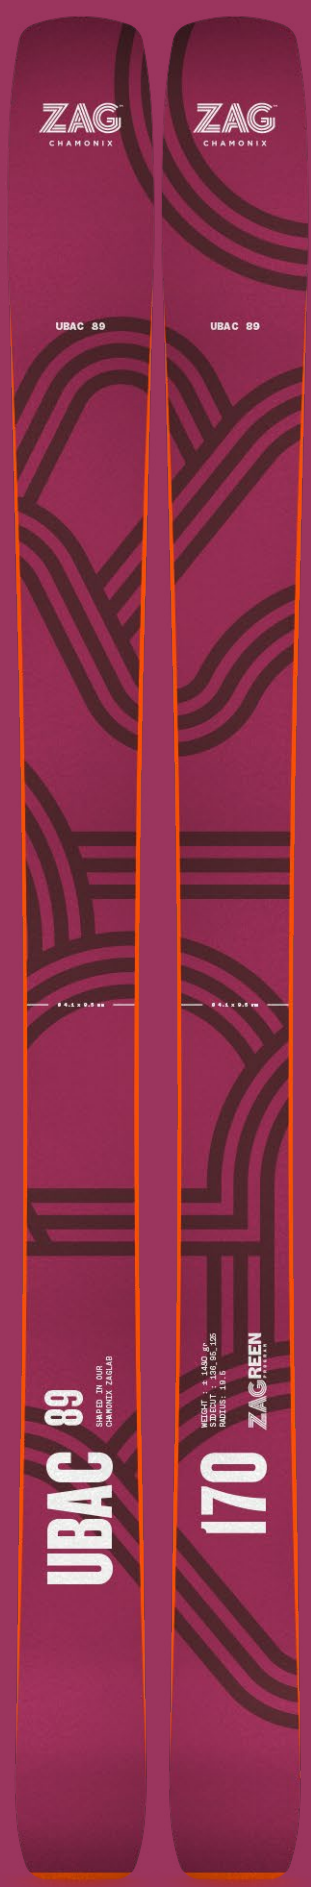

Built with the best ratio between lightness and skiability to give ski tourers the closest feeling to a freeride ski possible. The wood core saves a few extra grams without impacting the feeling underfoot or the resistance of the material. Thick edges and ABS sidewalls make the UBAC range durable and impact resistant.

- 1 - New polyamide topsheet : 50% bio-sourced, durability +++.
- 2 - High resistance carbon & glass fiber : Skiability and lightness.
- 3 - New semi-Cap construction : ABS sidewalls for energy transmission.
- 4 - New poplar-paulownia wood core : Lightness & response.
- 5 - High resistance edges : Durability.
- 6 - Recycled sintered bases : Slide, durability.
- 7 - Titanal plate : Anti-pullout system for light bindings.
- 8 - Rubber : Vibration dampening.

# UBAC 89

## As far as you want !

The lightest and narrower of the range, allowing you to go for the longest and farest run in the backcountry. Keeping the UBAC dna of a freeride feel and great downhill abilities. With great flex stiffness, the UBAC 89 is also a beast in hard pack snow and has a strong grip for the steepest slopes.

# UBAC 95

**The favourite ski of your favourite guide.**

In one word : VERSATILITY. The UBAC 95 is the to go choice of mountain guide for one reason it can do it all. 95mm underfoot to enjoy every terrain in a light package for long hikes. The new shape of the UBAC 95 makes it even more able on changing snow, still super fun and accessible but stiffer flex to go down fast.

## Is this a freeride ski?

You are this one friend in the group who always wants to go fast, jump and ride aggressively? The UBAC 102 is your best pick then, if you like larger skis and you are a powder seeker, this one won't disappoint you. You probably won't see the difference with your traditional freeride skis and get a bunch of fun.

# ULTRA LIGHT CONSTRUCTION

The combination of lightness and performance while being rigid in torsion and in flex, makes the ADRET exemplary in reliability. These are perfect characteristics for an ultra light touring ski! High resistance carbon fiber gives this ski the lightness and stiffness expected by the most demanding of ski tourers and is virtually unbreakable ! The rubber fiber absorbs vibrations adding to it's impeccable feeling on snow.

- 1 - Polyamide topsheet : 50% bio-sourced, durability and shiny colors.**
- 2 - High resistance carbon (62%) & glass fiber : Maximal resistance and lightness.**
- 3 - Cap construction : No ABS sidewalls for lightness.**
- 4 - Paulownia wood core : Lightness.**
- 5 - High resistance thin edges : Lightness.**
- 6 - Sintered bases : Slide, durability.**
- 7 - Phenol plate : Anti-pullout system for ultra light bindings.**
- 8 - Rubber : Vibration dampening.**

# ADRET 78

**If you need to get home for lunch !**

An ultra-light ski that has excellent skiability for it's category. Torsionally stiff increases edge hold to give you that secure feeling in icy conditions on the downs or the ups. Dedicated for those who are looking for a ski imagined and developed for the steeps, ski mountaineering or ski touring excursions over multiple days. The ADRET 78 also suits those looking to add a mountaineering ski for training to their quiver.

# HEAVY DUTY LIGHT CONSTRUCTION

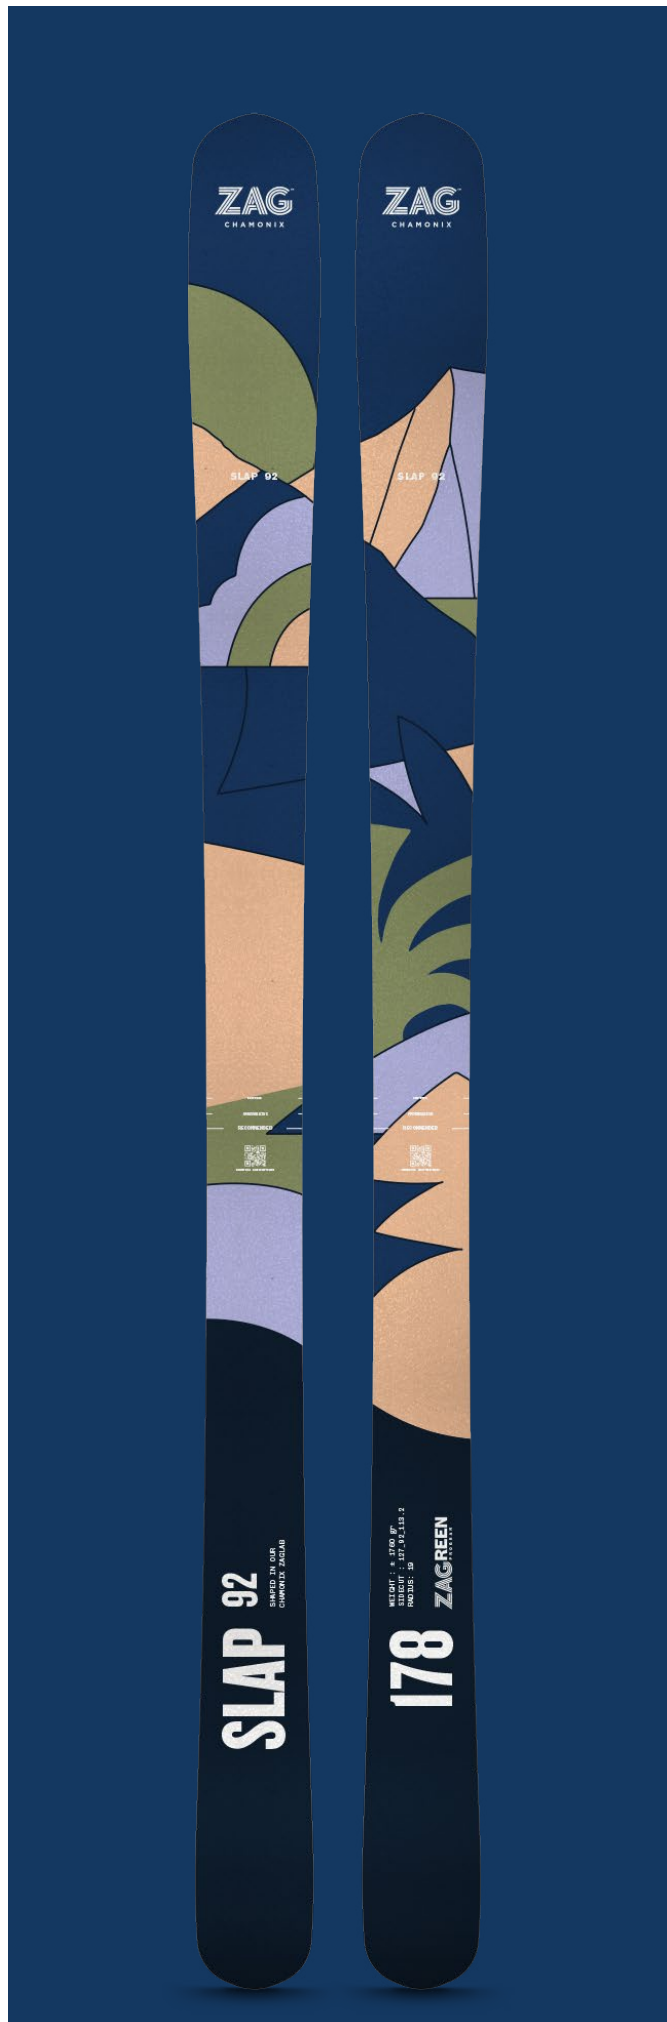

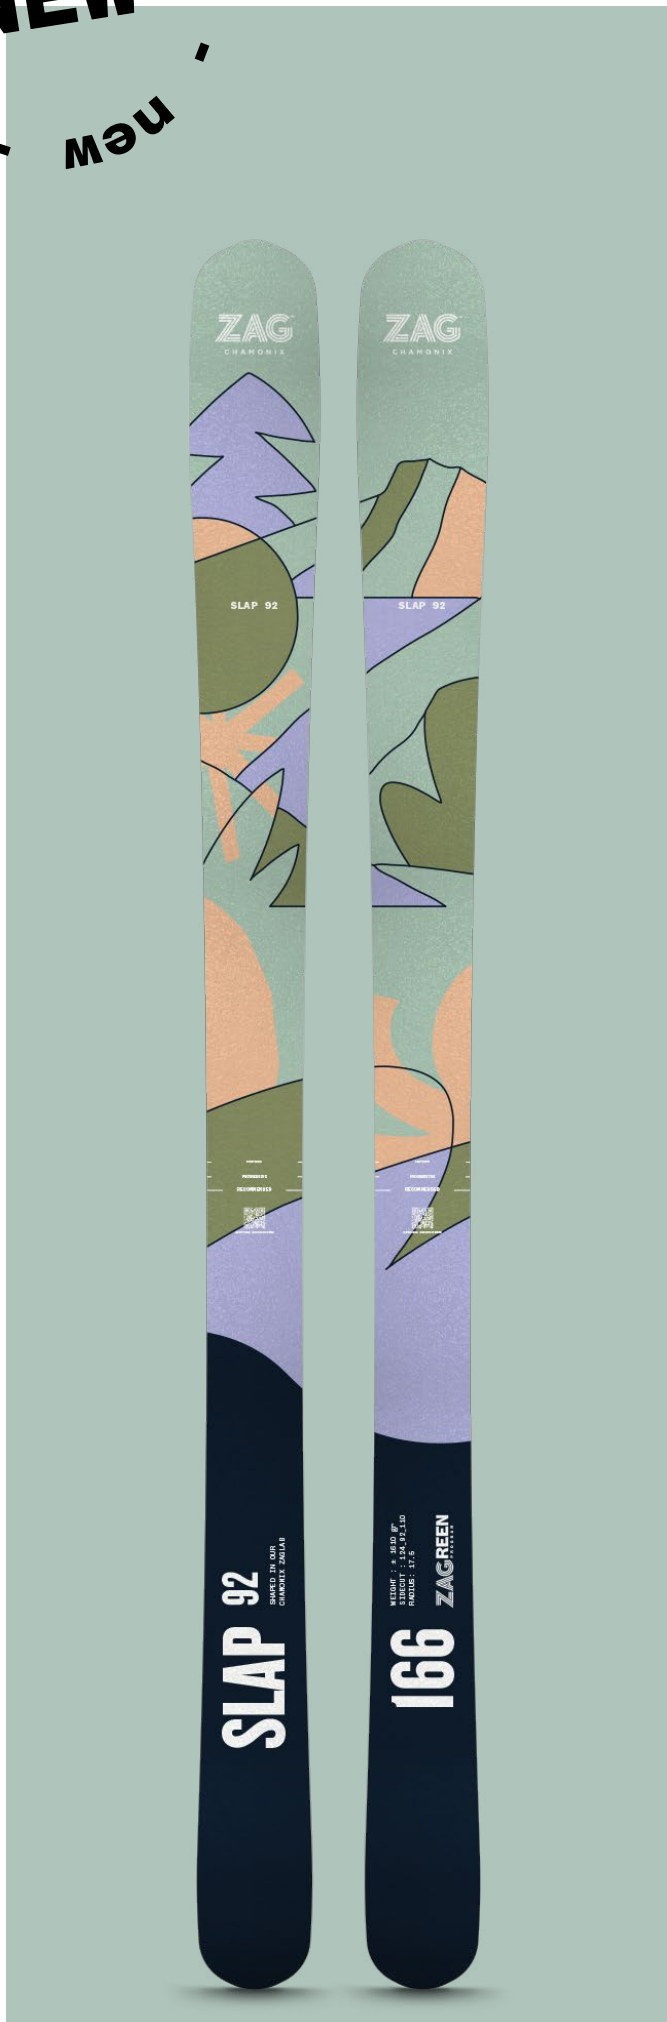

Lightness and power to hit the groomers and open fields of fresh pow. This construction uses multi-axial fiberglass, increasing its skiability and power by providing stiffness in torsion and flex. The goal was also to reduce the weight of these XXL skis, hence the combination of paulownia (lightness) and poplar (resistance). In the end, this construction creates a light and playful ski that's stable at high speeds and resistant over time !

- 1 - Polyamide topsheet : 50% bio-sourced, durability and shiny colors.
- 2 - Quadri-axial fiber : Pop and resistance.
- 3 - Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 - Flax : Dampening properties.
- 5 - Poplar and Paulownia wood core : Lightness and resistance.
- 6 - High resistance edges : Durability.
- 7 - Sintered bases : Slide, durability.
- 8 - Phenol plate : Anti-pullout system for bindings.
- 9 - Rubber : Vibration dampening.

# HEAVY DUTY<sup>TI</sup> CONSTRUCTION

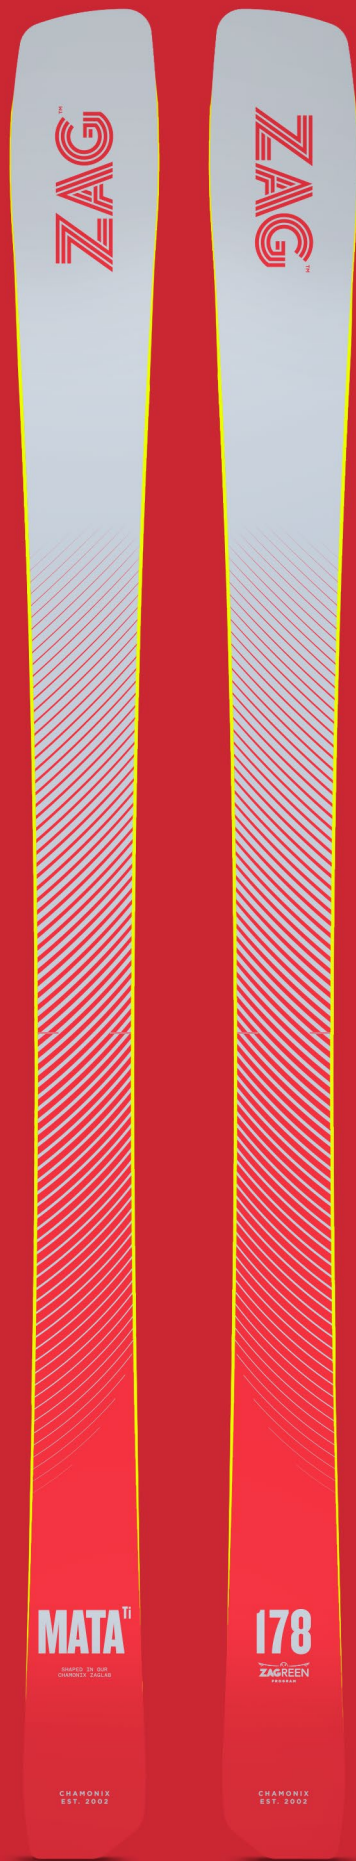

Inserting titanal on our normal heavy duty construction was thought to enhance grip and enhance energy return. This construction is perfect for skis in a carving range that need to be precise. The quadriaxial fiberglass and rubber inserts creates a ski that's comfortable in all types of conditions.

- 1 - Polyamide topsheet : 50% bio-sourced, durability & shiny colors.
- 2 - Quadri-axial fiber : Power and stability.
- 3 - Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 - Titanal inserts : Efficient edge to edge transision and grip.
- 5 - Full poplar wood core : Lightness and resistance.
- 6 - High resitance edges : Durability.
- 7 - Sintered bases : Slide, durability.
- 8 - Rubber : Vibration dampening.

# MATA<sup>Ti</sup>

**The all-mountain ski that you've never seen before!**

This marks the arrival of a new ski and a new state of mind within the ZAG family. This ski was designed with an explosive asymmetric shape and impressive skiability. 90mm under foot to give it versatility coupled with a titanal plate to let you control the power when you want it. Agressive but not exclusive, carving has never been as enjoyable than with the new MATA Ti.

# HEAVY DUTY CONSTRUCTION

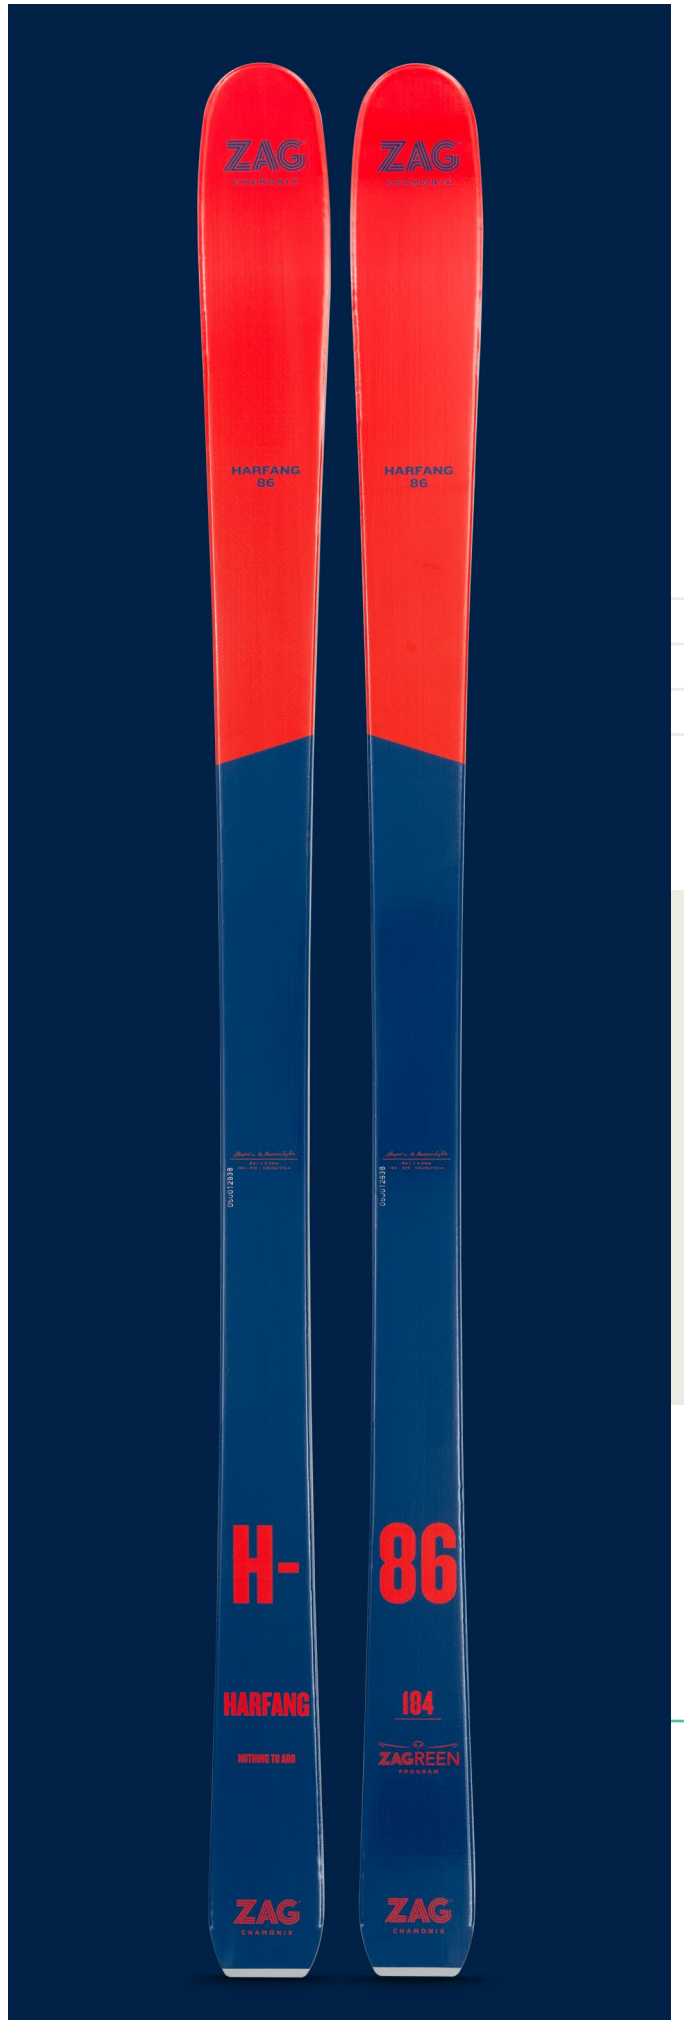

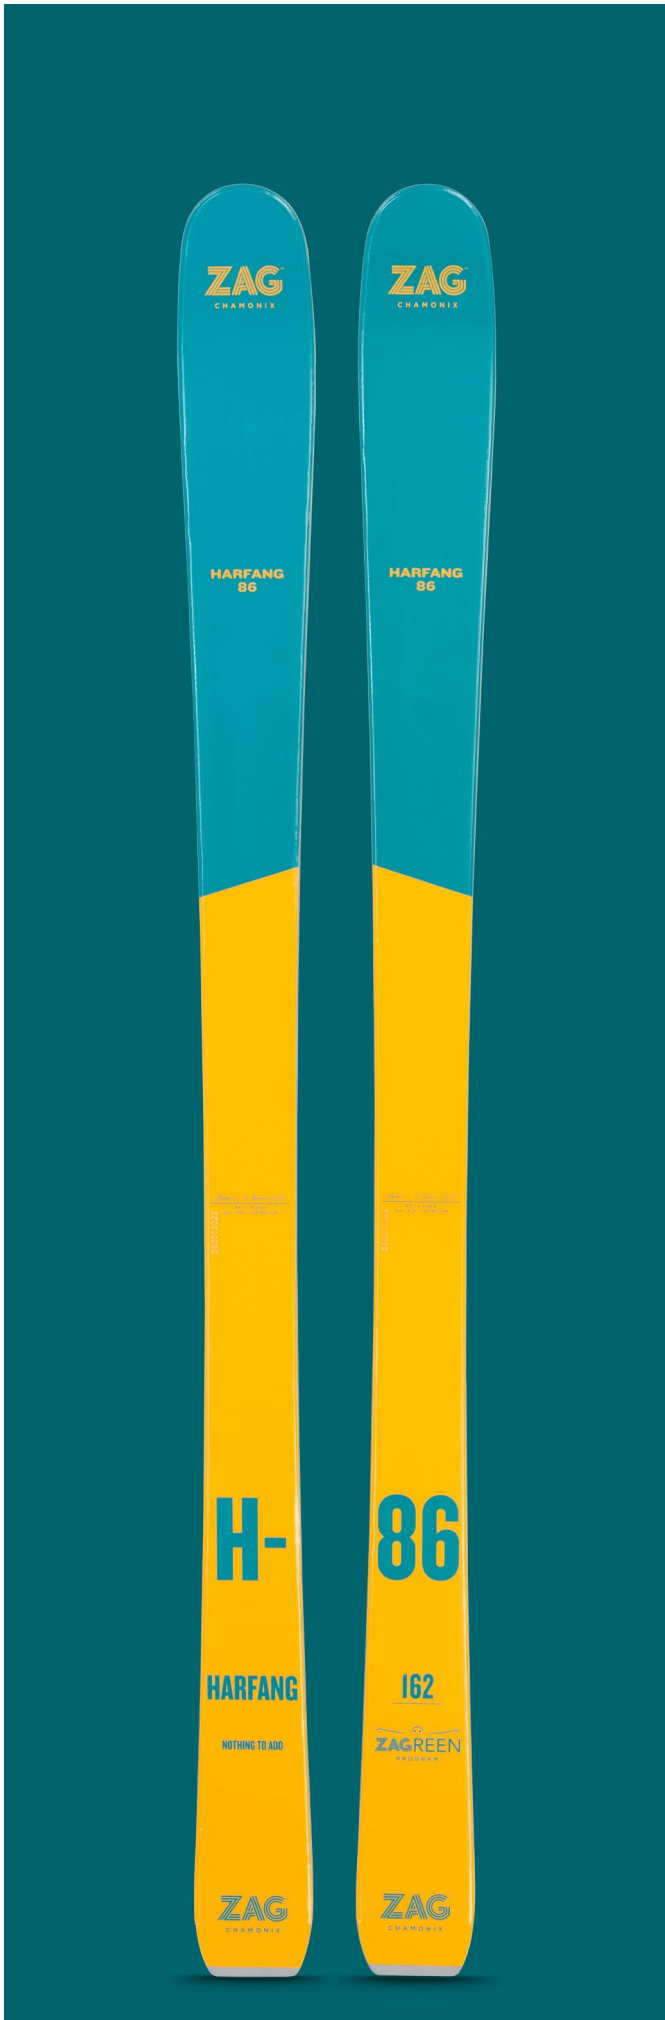

The best compromise between flex and torsion. Composed of double layer multiaxial fiberglass, the objective is to make this ski effective in all types of snow. Based on the legendary H-112, having proven themselves on the feet of our best riders, the heavy duty construction gives skiers maximum safety and reliability. Lightweight for more float but rigid to enjoy the most out of tracked out snow, this construction gives you grip in the toughest of conditions !

- 1 - Polyamide topsheet : 50% bio-sourced, durability shiny colors.
- 2 - Quadri-axial fiber : Stability and resistance.
- 3 - Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 - Full poplar wood core : Lightness and resistance.
- 5 - High resistance edges : Durability.
- 6 - Sintered bases : Slide, durability.
- 7 - Phenol plate : Anti-pullout system for bindings.
- 8 - Rubber : Vibration dampening.

# HARFANG 86

## Cruise in-bounds !

The Harfang 86 is ideal for skiers looking for an on-piste ski perfect for all conditions. Maneuverable and comfortable while carving up the slopes, it'll surprise you even in ungroomed areas.

# SIZE GUIDE

YOU'LL SEE, IT'S VERY EASY TO APPLY!

## EXAMPLE :

Your size [a] : 173 cm / Your level [b] : Expert

Choose your ski range and model : HARFANG 96

Calculate :

I'm 173 cm and I'm an Expert [-2 ou +8] :

173 - 2cm = 171 cm or 173 + 8cm = 181 cm

Two sizes could correspond : 170cm & 176cm

Find the box in the table that corresponds to you.

These indications are only theoretical, often all is not played with a few centimeters.

To find the best size, please refer to the advice of the pro in a retail store (list available on our website).
